Danske Invest

PAI 5 October, 2024

Danske Invest Select Forvaltning Obligationer is committed to consider the principal adverse impacts of its investments as further outlined in the prospectus of the fund and with information on the measured average impacts for the financial year disclosed in the annual report. We further refer to information in the fund's prospectus and annual report available at https://www.danskeinvest.com.

Principal adverse impacts are the negative, material or likely to be material effects on sustainability factors caused, compounded by or directly linked to investments. Sustainability factors refer to environmental, social and employee matters, respects for human rights, anti-corruption and anti-bribery matters. For further information on how Danske Invest Management A/S and prioritise and identify principal adverse impacts, please see the disclosures available at https://www.danskeinvest.dk/page/ansvarlige_investeringer_oplysninger.

In this publication shows the principal adverse impacts on sustainability factors measured for investments in Danske Invest Select Forvaltning Obligationer on Aug. 2024 on basis of mandatory indicators and certain other indicators defined in the Commission Delegated Regulation (EU) 2022/1288.

The methodologies and data sets applied for the measurement of adverse impacts in this publication are similar to those used in the annual report for Forvaltning Obligationer. However, as calculations and data are refined at an ongoing basis certain deviations might be expected. Also, where the annual report is based on the average impacts measured throughout the year, the impacts outlined in this publication reflect the impacts as measured on Aug. 2024.

The measurement on principal adverse impacts relies on data from one external vendor, ISS ESG. The data coverage from ISS ESG varies greatly depending on the indicator. This affects a potential margin of error in the reported figures, which is why the table below also indicates data coverage for each individual indicator. For the indicators where an average value is reported and where there is not full data coverage on the relevant asset classes, only assets with coverage are included in the weighting. This means that for the purpose of the calculation, it is assumed that the values for assets with data coverage are representative of the assets where there is no coverage.

At the present time, it is difficult to assess the actual margin of error of the calculations, but we expect it to be substantial.

The reference index used in this document is the fund's official reference index.
