

This publication shows the principal adverse impacts on sustainability factors measured for investments in Norske Aktier Restricted – Akkumulerende KL on Mar. 2024 on basis of mandatory indicators and certain other indicators defined in the Commission Delegated Regulation (EU) 2022/1288.

Norske Aktier Restricted – Akkumulerende KL is committed to consider the principal adverse impacts of its investments as further outlined in the prospectus of the fund and with information on the measured average impacts for the financial year disclosed in the annual report.

Principal adverse impacts are the negative, material or likely to be material effects on sustainability factors caused, compounded by or directly linked to investments. Sustainability factors refer to environmental, social and employee matters, respects for human rights, anti-corruption and anti-bribery matters.

For further information on how Danske Invest Management A/S and Norske Aktier Restricted – Akkumulerende KL prioritise and identify principal adverse impacts, please see the disclosures available at <https://www.danskeinvest.com>.

The methodologies and data sets applied for the measurement of adverse impacts in this publication are similar to those used in the annual report for Norske Aktier Restricted – Akkumulerende KL. However, as calculations and data are refined at an ongoing basis certain deviations might be expected. Also, where the annual report is based on the average impacts measured throughout the year, the impacts outlined in this publication reflect the impacts as measured on Mar. 2024.

The measurement on principal adverse impacts relies on data from one external vendor, ISS ESG. The data coverage from ISS ESG varies greatly depending on the indicator. For the same reason, impacts reported are supplemented with information on the coverage per indicator. Where data coverage is not 100%, the average impacts for assets with data coverage is applied as a proxy for the remaining assets eligible for that indicator. This means as an example that for a portfolio containing 50 percent equities and 50 percent sovereign bonds, the weighted average for an investee company indicator will be representative to the 50%.

| Greenhouse gas emissions (GHG)   | Mar. 2024 | Coverage | Benchmark | Coverage |
|--|-----------|----------|-----------|----------|
| Scope 1 GHG Emissions (tons)<br>Direct emissions from sources that are owned or controlled by the company                                | 4,651     | 98.5%    | N/A       | 98.6%    |
| Scope 2 GHG Emissions (tons)<br>Indirect emissions from the use of purchased energy  | 612       | 98.5%    | N/A       | 98.6%    |
| Scope 3 GHG Emissions (tons)<br>All other indirect emissions that occur across the value chain   | 44,955    | 98.5%    | N/A       | 98.6%    |
| Total GHG emissions (tons)   | 50,218    | 98.5%    | N/A       | 98.6%    |
